

PRODUCT OVERVIEW

Product type:

- ✓ Dirt-resistant Heat-Cured Fluoropolymer Paint.

Benefits:

- ✓ Exhibits excellent dirt-resistant properties (Dirt-resistant Coating), weather resistance, and adjustable gloss levels.
- ✓ Offers great workability and is ideal for maintaining the aesthetic appeal of buildings and bridges.
- ✓ Resists the accumulation of grime over the years and boasts superior water and chemical resistance.

Usage:

Perfect for protecting and maintaining the appearance of exterior surfaces on buildings and bridges, especially when painting materials based on aluminum alloys.

Main features:

Being dirt-resistant, it keeps its appearance clean and maintains its aesthetics for a long time.

It has excellent weather resistance, maintaining performance even under severe weather conditions.

Gloss levels can be adjusted, catering to a variety of design needs.

Coating specification:

Pre-treatment: Appropriate substrate preparation.

Painting method: Electrostatic painting/Air spray/Airless painting.

Curing Condition: This product is a two-pack system. When using, it is necessary to mix the additive at a 40:1 ratio, stir well, then dilute with a special thinner before starting the painting process. 170°C × 20 minutes.

Product specification:

Paint form: With additive / Solvent-based.

Ratio: 40:1

Color: Custom colors available.

Available from glossy to semi-gloss.

Thinner: Dedicated thinner for Fluororesin.
