PRODUCT OVERVIEW

MS FCO Powder Booth System

coature

Product type:

MS FCO Powder Booth System

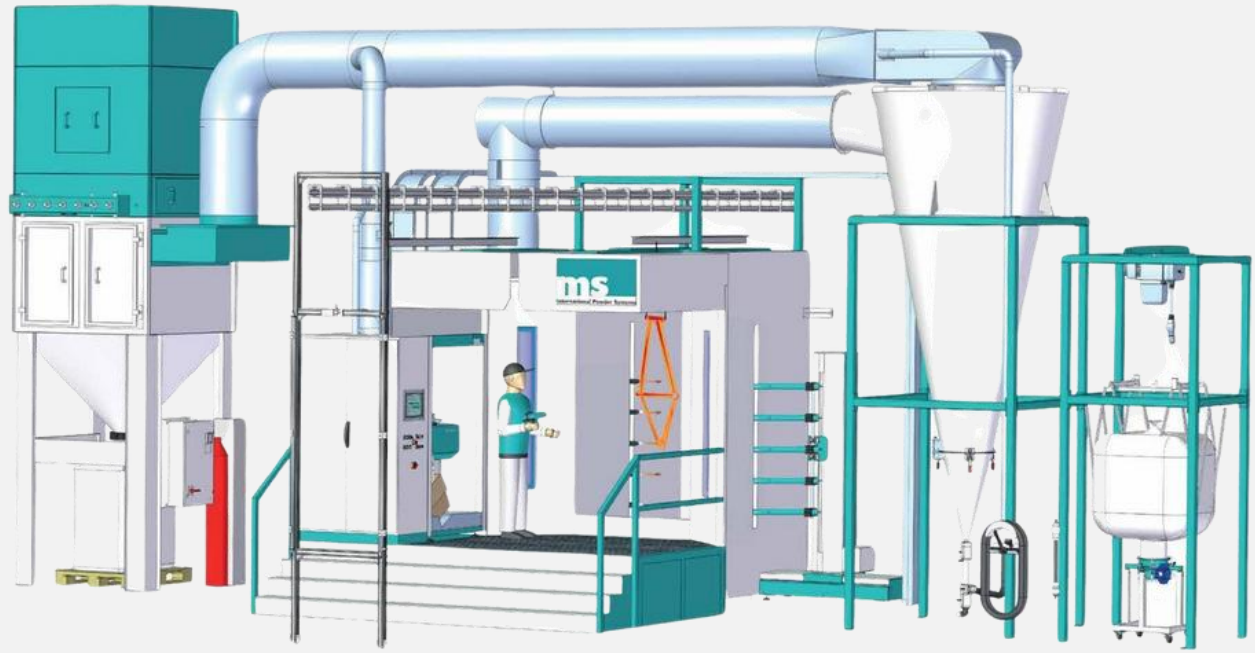
- As product variation increases and production volumes become smaller, flexibility in the design of powder coating booth systems is essential. With MS's latest high-speed color change technology equipped with a user-friendly PLC (process control), we offer the optimal combination of booth, powder kitchen, powder circulation, powder recovery, coating equipment, and control systems.As a result, cost-effectiveness is improved, enabling a faster return on investment.
- The FCO powder coating booth system features a manual coating station that is spacious and well-lit. The entire area is properly ventilated by a grated (grid-style) exhaust system, preventing powder accumulation on the floor.

coature

Manual coating area integrated with a scissor lift table

Automatic coating through combined X-Y-Z axis control

Flexibly supports powder coating for flat surfaces and large workpieces



Features of the MS FCO Powder Coating Booth System

In full recovery mode, color changes can be completed in *under 6 minutes, improving productivity (*Depending on the color to be changed, booth size, and operator skill level)
MS's double-wall PVC sandwich-type cabin booth structure improves coating efficiency
The unique self-cleaning MS cyclone design increases overall system operation efficiency up to 97%
Equipped with high-performance PLC control sensors to constantly optimize the amount of circulating powder paint
The manual coating area includes exhaust equipment and grating (grid flooring) for pre- and post-coating processes
The compact installation footprint of the automatic equipment makes cleaning the booth easy
Low noise operation, typically below 80 dBA
