

# PRODUCT OVERVIEW

## **MS Ultrasonic Sieving System 60 US**

## *Product type:*

**This easy-to-clean sieving system is compatible with all powder coating systems. The ultrasonic sieve is typically included as standard equipment in the powder kitchen of all MS high-speed color change powder booth systems.**

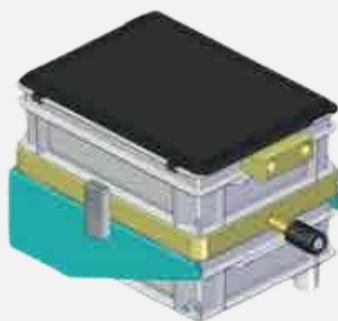

## **MS Ultrasonic Sieving System 60 US**

- All users of powder coating equipment will appreciate the excellence of the MS Ultrasonic Sieving System when they witness the high-quality surface finish.
- By using the newly developed MS Ultrasonic Sieving System, all types of foreign matter can be effectively prevented from contaminating the powder, reducing powder waste and improving the quality of the coated surface.
- The controller automatically selects the optimal vibration frequency based on the amount and density of the powder used, allowing for efficient and effective removal of even the smallest contaminants from both new and reclaimed powder.

## **Features of the MS Ultrasonic Sieving System 60 US**

---

Maximum sieving capacity: 6 kg/min with mesh width from 100 to 200  $\mu\text{m}$

Fully automatic frequency variation control via MS ultrasonic controller, compatible with all powder types

High-quality surface finish without foreign particle contamination

Can be integrated into any powder recovery system

Sieving unit can be used from powder kitchen, fluidizing container, or remote storage

Efficient processing of powder stored for long periods, enabling cost reduction

Adjustable ultrasonic frequency with 96 programs to suit all powder types

Easy-to-clean design considering fast color change operations

External control via standard digital or analog connections

System programs selectable from: continuous, pulse, or sweep (variable frequency)
